Valentin Cassarino

Front-end Engineer

About me

I'm an economist turned engineer. I started studying economics back in 2020, but, 3 years after starting the degree, I realized that my passion was in the tech field. I learned almost all I know about programming by myself, and I've been working really hard to get to where I am today.

About me personally? I'm really into the world of product design and tech trends, and I love a good chat about anything tech. When I'm working on a project, I'm all in, aiming to make things as great as they can be for the people using them.

Experience

Front-end Engineer at Yakoa   Apr 2023 - now

At Yakoa, we aim to build the best IP protection platform for the blockchain. Some noteworthy aspects about my work are:

— Got experience working solo for the first months and mentoring interns onwards.

— Built the MVPs for our two apps, using NextJS.

— Built the second iteration of our apps, using plain React this time.

— Worked with multiple data fetching libraries, such as react-query, urql and Relay.

— Got familiarized with web3 terms and how the blockchain works.

— Wrote the full test suite for both of our applications, using Playwright.

— Built the company's own design system. Had to dive deep into bundling to make the best out of it.

— Participated in the product design/development from its inception to its release.

Front-end Engineer at Selehann   Mar 2022 - Apr 2023

— Participated in multiple projects, some of them worth mentioning are: a CMS for a US government-related project, a no-code tool for training AI models and an NFT-related project.

— Worked with many tools, such as React, NextJS, Typescript, Docker, AWS, Azure, Tailwind.

— Got experience working with large teams. We were approximately 400 people working on the same thing, so collaboration between teams was one of the most important parts of the role.

— Led a team of 10 other front-end engineers.

— Designed a product from scratch and discovered my passion for building great user experiences.

Full-stack Engineer Freelance   May 2021 - Mar 2022

— Got the sense of how it is to work on the IT field

— Mostly built websites for local companies
